

VAMSHI VADE

Full Stack Developer | MERN Stack Developer | React.js | Angular

Hyderabad, Telangana, India. +91 7013415923 vamshi.vade1@gmail.com [LinkedIn](#) [GitHub](#) [Portfolio](#)

Professional Summary

MERN Stack Developer with 2.6 years of experience building scalable web applications across frontend and backend development. Skilled in React.js, Next.js, JavaScript, Node.js, Express.js, and MongoDB, with experience in creating user interfaces, integrating REST APIs, developing backend services, managing databases, and implementing real-time functionality using WebSockets. Experienced in building production-ready web and Telegram Mini App applications, including Web3 platforms with TON and Solana integrations. Comfortable working as a MERN Stack Developer, Full Stack Developer, React.js Developer, or Frontend Developer based on project requirements.

Technical Skills

Languages	:	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend	:	React.js, Next.js, Angular, Redux Toolkit, React Router, Context API, UI Development, Responsive Web Design, Component-Based Architecture, REST API Integration, Frontend Performance Optimization
Backend	:	Node.js, Express.js, REST API Development, WebSockets, JWT Authentication
Database	:	MongoDB, Mongoose
Tools	:	Git, GitHub, Postman, Parcel

Professional Experience

STRING METaverse LIMITED

Software Developer | Jan 2024 – Mar 2026

- Created web applications and Web3 gaming platforms using **React.js, Next.js, Node.js, Express.js, MongoDB, and blockchain technologies**.
- Built modular frontend features using component-based architecture and maintained reusable application components.
- Connected frontend applications with REST APIs for authentication, user data, game information, rewards, and wallet-related functionality.
- Added real-time functionality using WebSockets for game updates, player interactions, scores, and leaderboard changes.
- Implemented JWT-based authentication and user management features.
- Worked with MongoDB and Mongoose to manage application data, including user profiles, game sessions, scores, and rewards.
- Improved application performance through efficient rendering, lazy loading, state management, and database query optimization.
- Collaborated with backend developers on API integration, business logic, and blockchain-related features.

Featured Projects

String Games – Telegram Web3 Gaming Platform

Technologies: React.js, JavaScript, REST APIs, WebSockets, TON

- Created the frontend for a production-ready Telegram Mini App using **React.js**.
- Designed mobile-first interfaces suitable for the Telegram environment.
- Connected APIs for authentication, user profiles, game history, wallet balances, and rewards.
- Added live game updates using **WebSockets**.
- Created interfaces for games including **Crash, Dice, Mines, and Limbo**.
- Connected TON wallet functionality and blockchain transaction interfaces.
- Improved loading and rendering performance through lazy loading and efficient state handling.
- Worked closely with backend developers to connect frontend features with application services.

String Arc8 – Telegram Arcade Gaming Platform

Technologies: Next.js, JavaScript, REST APIs

- Contributed to a Telegram-native arcade gaming platform built with **Next.js**.
- Structured the application using modular React components.
- Created interfaces for mini-games including **Doodle Jump, Stack, Flappy Bird, Snake, and Space Invaders**.
- Connected application services for leaderboards, user profiles, rewards, and achievements.
- Ensured layouts worked effectively across mobile and desktop devices.
- Supported real-time score and leaderboard updates.
- Focused on smooth user interactions and overall application performance.

String Drive & String Tetris – Telegram Mini App Gaming Platforms

Technologies: React.js, Node.js, Express.js, MongoDB, WebSockets

- Worked across frontend and backend development for a racing game and a play-to-earn puzzle game.
- Created React.js interfaces for both Telegram Mini Apps.
- Built REST APIs using **Node.js and Express.js**.
- Designed MongoDB schemas for users, game sessions, scores, rewards, and leaderboards.
- Connected frontend screens with backend services for gameplay and data synchronization.
- Added live player interactions and game updates using **WebSockets**.
- Worked on scoring, game progression, and reward calculation functionality.
- Created leaderboard, referral, task, and achievement modules.
- Supported authentication, user management, frontend rendering, and database performance improvements.

Education

Bachelor of Science (B.Sc.) – MPC

CGPA: 8.34 | 2017 – 2020

SR & BGNR Government College, Khammam | Kakatiya University
